

1 Introduction

2 Background

3 Traversal Methods

Algorithm 1 Ordered Depth First Traversal

```
1: procedure ODF_TRAVERSE( $b, r$ )
2:    $s \leftarrow \{b\}$ 
3:    $c \leftarrow \infty$ 
4:   while  $s \neq \emptyset$  do
5:      $n \leftarrow \text{pop}(s)$ 
6:     if  $n \in \text{branches}(b)$  then
7:       if  $\text{intersect}(r, n.\text{left}) < c$  then
8:          $\text{push}(s, n.\text{left})$ 
9:       end if
10:      if  $\text{intersect}(r, n.\text{right}) < c$  then
11:         $\text{push}(s, n.\text{right})$ 
12:      end if
13:    else if  $n \in \text{leaves}(b)$  then
14:      if  $\text{intersect}(r, n.\text{prim}) < c$  then
15:         $t \leftarrow n.\text{prim}$ 
16:         $c \leftarrow \text{intersect}(r, t)$ 
17:      end if
18:    end if
19:  end while
20:  if  $c = \infty$  then
21:    return null
22:  end if
23:  return  $t$ 
24: end procedure
```

Algorithm 2 Ray Order Traversal

```
1: procedure RAYORDER_TRAVERSE( $b, r$ )
2:    $q \leftarrow \{\}$ 
3:    $\text{push}(q, n.\text{left}, \text{intersect}(r, n.\text{left}))$ 
4:   while  $q \neq \emptyset$  do
5:      $n \leftarrow \text{pop}(q)$ 
6:     if  $n \in \text{branches}(b)$  then
7:        $\text{push}(q, n.\text{left}, \text{intersect}(r, n.\text{left}))$ 
8:        $\text{push}(q, n.\text{right}, \text{intersect}(r, n.\text{right}))$ 
9:     else if  $n \in \text{leaves}(b)$  then
10:      if  $\text{intersect}(r, n.\text{prim}) \neq \infty$  then
11:         $\text{push}(q, n.\text{prim}, \text{intersect}(r, n.\text{prim}))$ 
12:      end if
13:    else if  $n \in \text{primitives}(b)$  then
14:      return  $n$ 
15:    end if
16:  end while
17:  return null
18: end procedure
```

4 Experimental Setup

5 Results

6 Conclusion and Future Work

Figure 1: Not bad
